

Reptile Word Search

Did you know that reptiles are a type of animal that cannot maintain an internal body temperature? Since they have no fur, feathers, hair or sweat glands. This means they need to be in the sun or shade to maintain their temperature. In other words, reptiles are cold blooded. National Geographic notes that reptiles are “air-breathing vertebrates covered in special skin made up of scales, bony plates or a combination of both.”

Directions: Find the hidden reptiles in this puzzle. Words can go in any direction. Words can share letters as they cross over each other.

Alligator
Cobra
Iguana
